Subject: GC/MS Question

Hi Peter-

I received some capsules of Vyvanse® (Lisdexamfetamine dimesylate) to analyze but am having trouble doing it. From what I've read, it's a prodrug of dextroamphetamine and is only activated by an enzyme in the stomach/GI tract. Have you run into this? Any idea how to analyze it? FTIR didn't come up with anything. Also, I know that it is a CII federally, so I'm guessing that it would it would a class B for us, right?

Thanks,

Sonja
